

Exploring Lifespan Development

2nd Edition Study Guide

Developmental psychology

the field has expanded to include adolescence, adult development, aging, and the entire lifespan. Developmental psychologists aim to explain how thinking

Developmental psychology is the scientific study of how and why humans grow, change, and adapt across the course of their lives. Originally concerned with infants and children, the field has expanded to include adolescence, adult development, aging, and the entire lifespan. Developmental psychologists aim to explain how thinking, feeling, and behaviors change throughout life. This field examines change across three major dimensions, which are physical development, cognitive development, and social emotional development. Within these three dimensions are a broad range of topics including motor skills, executive functions, moral understanding, language acquisition, social change, personality, emotional development, self-concept, and identity formation.

Developmental psychology explores the influence...

Personal development

of dreams and aspirations. Personal development may take place over the course of an individual's entire lifespan and is not limited to one stage of a

Personal development or self-improvement consists of activities that develops a person's capabilities and potential, enhance quality of life, and facilitate the realization of dreams and aspirations. Personal development may take place over the course of an individual's entire lifespan and is not limited to one stage of a person's life. It can include official and informal actions for developing others in roles such as a teacher, guide, counselor, manager, coach, or mentor, and it is not restricted to self-help. When personal development takes place in the context of institutions, it refers to the methods, programs, tools, techniques, and assessment systems offered

to support positive adult development at the individual level in organizations.

Moral development

research tool for studying moral development across cultures that can aid in determining possible universal traits in the lifespan of individuals. In

Moral development focuses on the emergence, change, and understanding of morality from infancy through adulthood. The theory states that morality develops across the lifespan in a variety of ways. Morality is influenced by an individual's experiences, behavior, and when they are faced with moral issues through different periods of physical and cognitive development. Morality concerns an individual's reforming sense of what is right and wrong; it is for this reason that young children have different moral judgment and character than that of a grown adult. Morality in itself is often a synonym for "rightness" or "goodness." It also refers to a specific code of conduct that is derived from one's culture, religion, or personal philosophy that guides one's actions, behaviors, and thoughts.

Child development

Structural Bioinformatics (2nd ed.). Hoboken (N.J.): Wiley-Blackwell. ISBN 978-0-470-18105-8. "Infant Emotion: Lifespan Development"; Open Education Resource

Child development involves the biological, psychological and emotional changes that occur in human beings between birth and the conclusion of adolescence. It is—particularly from birth to five years— a foundation for a prosperous and sustainable society.

Childhood is divided into three stages of life which include early childhood, middle childhood, and late childhood (preadolescence). Early childhood typically ranges from infancy to the age of 6 years old. During this period, development is significant, as many of life's milestones happen during this time period such as first words, learning to crawl, and learning to walk. Middle childhood/preadolescence or ages 6–12 universally mark a distinctive period between major developmental transition points. Adolescence is the stage of life that typically...

Women's studies

the lifespan. Bracha L. Ettinger's matrixial theory is influential in the fields of art pedagogy in relation to ethics of care. Women's studies programs

Women's studies is an academic field that draws on feminist and interdisciplinary methods to place women's lives and experiences at the center of study, while examining social and cultural constructs of gender; systems of privilege and oppression; and the relationships between power and gender as they intersect with other identities and social locations such as race, sexual orientation, socio-economic class, and disability.

Popular concepts that are related to the field of women's studies include feminist theory, standpoint theory, intersectionality, multiculturalism, transnational feminism, social justice, Matrixial gaze, affect studies, agency, bio-politics, materialism, and embodiment. Research practices and methodologies associated with women's studies include ethnography, autoethnography...

Disability studies

ISBN 978-1-4522-6520-9. OCLC 62778255. Barnes, C.; Mercer, G. (2010). Exploring disability (2nd ed.). Polity Press. ISBN 978-0-7456-9891-5. OCLC 1037272384. Ben-Moshe

Disability studies is an academic discipline that examines the meaning, nature, and consequences of disability. Initially, the field focused on the division between "impairment" and "disability", where impairment was an impairment of an individual's mind or body, while disability was considered a social construct. This premise gave rise to two distinct models of disability: the social and medical models of disability. In 1999 the social model was universally accepted as the model preferred by the field.

However, in recent years, the division between the social and medical models has been challenged. Alternative models of disability have increased, allowing for greater complexity and specificity in how disability is theorized. Additionally, there has been an increased focus on interdisciplinary...

Adult development

& Co.[page needed] Santrock, J. W. (2014). Essentials of LifeSpan Development (3rd edition). New York: McGraw Hill[page needed] Gold, Joshua M.; Rogers

Adult development encompasses the changes that occur in biological and psychological domains of human life from the end of adolescence until the end of one's life. Changes occur at the cellular level and are partially explained by biological theories of adult development and aging. Biological changes influence psychological and interpersonal/social developmental changes, which are often described by stage theories of human development. Stage theories typically focus on "age-appropriate" developmental tasks to be achieved at each stage. Erik Erikson and Carl Jung proposed stage theories of human development that encompass the entire life span, and emphasized the potential for positive change very late in life.

The concept of adulthood has legal and socio-cultural definitions. The legal definition...

Patricia McKinsey Crittenden

Association for the Study of Attachment. Her most well known work is Raising Parents: Attachment, Representation, and Treatment (2nd edition, 2016, Routledge)

Patricia McKinsey Crittenden (born 1945) is an American psychologist known for her work in the development of attachment theory and science, her work in the field of developmental psychopathology, and for creation of the Dynamic-Maturational Model of Attachment and Adaptation (DMM).

Compared to other work in attachment, the DMM emphasizes the organized self-protective function of attachment strategies (rather than disorganization) and the advantages of adaptation to dangerous circumstances (rather than security). The DMM describes self-protective strategies and patterns of information processing in greater detail than any other attachment-informed model. Crittenden developed an interlocking set of scientific assessments of attachment across the lifespan. The DMM is usable in research, forensic...

Arlene Istar Lev

& Gay Parenting Guide. Berkley Books. ISBN 978-0-425-19197-2. Lev,

A.I. (in press). Understanding Transgender Identities and Exploring Sexuality and Desire

Arlene Istar Lev is a North American clinical social worker, family therapist, and educator. She is an independent scholar, who has lectured internationally on topics related to sexual orientation and gender identity, sexuality, and LGBTQ families.

She has been a lecturer at the School of Social Welfare at the State University of New York at Albany since 1988, and is the founder and Project Director of its Sexual Orientation and Gender Identity Project. Additionally she has been an adjunct professor at Smith College of Social Work, Empire College, Rockway Institute, California School of Professional Psychology at Alliant International University, Excelsior College, Vermont College, and the Union Institute and University.

Arlene Lev has been a practicing psychotherapist and family therapist...

Echinocardium cordatum

History. 2nd Series. 7: 130–134. Agassiz, A. (1864). "Synopsis of the echinoids collected by Dr. W. Stimpson on the North Pacific Exploring Expedition

Echinocardium cordatum, also known as the common heart urchin or the sea potato, is a sea urchin in the family Loveniidae. It is found in subtidal regions in temperate seas throughout the world. It lives buried in the sandy sea floor.
