The Langlois Bridge at Arles is the subject of four oil paintings, one watercolor and four drawings by Vincent van Gogh. The works, made in 1888 when van Gogh lived in Arles, in southern France, represent a melding of formal and creative aspects. Van Gogh used a perspective frame that he built and used in The Hague to create precise lines and angles when portraying perspective.

Van Gogh was influenced by Japanese woodcut prints, as evidenced by his simplified use of color to create a harmonious and unified image. Contrasting colors, such as blue and yellow, were used to bring a vibrancy to the works. He painted with an impasto, or thickly applied paint, using color to depict the reflection of light. The subject matter, a drawbridge on a canal, reminded him of his homeland in the Netherlands...

Inkjet printing is a type of computer printing that recreates a digital image by propelling droplets of ink onto paper or plastic substrates. Inkjet printers were the most commonly used type of printer in 2008, and range from small inexpensive consumer models to expensive professional machines. By 2019, laser printers outsold inkjet printers by nearly a 2:1 ratio, 9.6% vs 5.1% of all computer peripherals.

The concept of inkjet printing originated in the 20th century, and the technology was first extensively developed in the early 1950s. While working at Canon in Japan, Ichiro Endo suggested the idea for a "bubble jet" printer, while around the same time Jon Vaught at Hewlett-Packard (HP) was developing a similar idea. In the late 1970s, inkjet printers that could reproduce digital images generated...

Electronic paper or intelligent paper, is a display device that reflects ambient light, mimicking the appearance of ordinary ink on paper – unlike conventional flat-panel displays which need additional energy to emit their own light. This may make them more comfortable to read, and provide a wider viewing angle than most light-emitting displays. The contrast ratio in electronic displays available

as of 2008 approaches newspaper, and newly developed displays are slightly better. An ideal e-paper display can be read in direct sunlight without the image appearing to fade.

Technologies include Gyricon, electrowetting, interferometry, and plasmonics.

Many electronic paper technologies hold static text and images indefinitely without electricity. Flexible electronic paper uses plastic substrates...
