FAQ

Q1: How often should I change the hydraulic fluid in my Cincinnati hydraulic shear?

A1: The frequency of hydraulic fluid changes depends on several factors, including the type of fluid used, the intensity of usage, and environmental conditions. Consult your Cincinnati

hydraulic shear manual for the manufacturer's recommended change intervals. Generally, it's advisable to perform regular checks and consider changing the fluid annually or more frequently if contamination or degradation is observed. Dirty or contaminated fluid can severely damage the hydraulic system.

Q2: How do I sharpen the blades on my Cincinnati hydraulic shear?

A2: Blade sharpening is a specialized task that often requires professional expertise. While some users may attempt minor sharpening, significant blade reshaping or repair usually necessitates contacting a qualified service technician or blade sharpening specialist. Improper sharpening can damage the blades and compromise cutting accuracy. Your Cincinnati hydraulic shear manual may provide guidance, but professional assistance is generally recommended.

Q3: What are the signs of a failing hydraulic system in my Cincinnati shear?

A3: Signs of a failing hydraulic system can include slow or sluggish operation, unusual noises (grinding, whining), fluid leaks, inconsistent cutting pressure, or overheating. If you observe any of these symptoms, immediately stop operation and contact a qualified service
