180 Days of Geography for Sixth Grade

Supplement your social studies curriculum with 180 days of daily geography practice! This essential classroom resource provides teachers with weekly geography units that build students' geography knowledge, and are easy to incorporate into the classroom. In a world that is becoming more connected and globalized, 21st century students must have the skills necessary to understand their world and how geography affects them and others. Students will develop their map and spatial skills, learn how to answer text- and photo-dependent questions, and study the 5 themes of geography. Each week covers a particular topic and introduces students to a new place or type of map. The first two weeks consist of a mini-unit that focuses entirely on map skills. For additional units, students will study various places, and how culture and geography are related. With a focus on the six populated continents, students will explore various types of maps including physical maps, political maps, topographic maps, thematic maps, climate maps, regional maps, and various topics including scale, legends, cardinal directions, latitude and longitude, and more. Aligned to state standards and National Geography Standards, this resource includes digital materials.

Geography for Life

This booklet is both an executive summary of "Geography for Life: National Geography Standards 1994" and an introduction to

Discovering The World Of Geography Grades 6 7 Includes Selected National Geography Standards

geography as an essential part of every child's education, and as an integral part of the lives of all U.S. citizens. The publication is illustrated on every page with photographs, paintings, graphs, and maps. It defines the power of geography and its beauty as the seeing, understanding, and appreciating of the web of relationships among people, places, and environments. Understanding geography, the path to competency in geography, and the components of geography are discussed. The 18 National Geography Standards are grouped into 6 essential elements: (1) the world in spatial terms; (2) places and regions; (3) physical systems; (4) human systems; (5) environment and society; and (6) the uses of geography. The skills and standards of each element are outlined. Using the standards for places and regions for grades K-4, the booklet demonstrates how a geography standard works and explains what the different parts of the standard and its structure mean. Two imperatives drive the National Standards for Geography: (1) geographic understanding must be set into a process of lifelong learning; (2) geographic understanding must be set into life contexts like school, family, society, and occupation. (DK)

180 Days of Geography for Third Grade

Daily Geography

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. Rediscovering Geography presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. Rediscovering Geography provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.

Hands-On Geography Grades 3-5

Fieldwork provides an opportunity to reinforce previous class-based learning and presents students with an opportunity to encounter new ideas and practice new skills. In the K-12 classroom, however, the rhetoric-reality gap between the declared need for fieldwork and doing fieldwork is striking. This project seeks to narrow the gap between rhetoric and reality by providing K-12 teachers with guidelines for integrating fieldwork into the geography curriculum. The emphasis throughout the project is on strategies that are local, small-scale, easy to implement, and inexpensive. The project framework is comprised of three interlinked approaches: observation, investigation, and inquiry. These approaches represent a progression in skills from activities that are teacher-directed, qualitative, and prescriptive to those that are more student-directed, interactive, and open-ended. The guide includes thirteen step-by-step examples of fieldwork activities, addressing the National Geography Standards and the Advanced Placement Human Geography Course, in both physical and human geography for grades K-12 and the university level. It provides checklists for pre-field planning, reconnaissance of the site, preparation and training, data collection, and evaluation of the findings. The project guide is divided into the following chapters: (1) "Fieldwork in the Geography Curriculum: Filling the Rhetoric-Reality Gap"; (2) "Survey of the Literature on How Fieldwork Affects Learning"; (3) "Designing, Planning, and Implementing Fieldwork"; and (4) "Examples of Fieldwork." Contains extensive references, as well as many tables, figures, cartoons, and photographs. (BT)
