Smart tag (Microsoft)

Office 2003 All-in-one. Indianapolis, Indiana: Que Publishing. p. 14. ISBN 0789729369. Korol, Julitta (2003). Learn Microsoft Excel 2002 VBA Programming with

Smart tags are an early selection-based search feature, found in later versions of Microsoft Word and beta versions of the Internet Explorer 6 web browser, by which the application recognizes certain words or types of data and converts it to a hyperlink. It is also included in other Microsoft Office programs as well as Visual Web Developer. Selection-based search allows a user to invoke an online service from any other page using only the mouse. Microsoft had initially intended the technology to be built into its Windows XP operating system but changed its plans due to public criticism.

Microsoft Office XP

open, edit, and save publications as HTML Visual Basic for Applications (VBA) support Word documents can now be imported directly to Publisher New features

Microsoft Office XP (codenamed Office 10) is an office suite which was officially revealed in July 2000 by Microsoft for the Windows operating system. Office XP was released to manufacturing on March 5, 2001, and was later made available to retail on May 31, 2001. A Mac OS X equivalent, Microsoft Office v. X was released on November 19, 2001.

New features in Office XP include smart tags, a selection-based search feature that recognizes different types of text in a document so that users can perform additional actions; a task pane interface that consolidates popular menu bar commands on the right side of the screen to facilitate quick access to them; new document collaboration capabilities, support for MSN Groups and SharePoint; and integrated handwriting recognition and speech recognition capabilities...

List of unit testing frameworks

"VbUnitFree Home"; "Vba Unit"; C2.com. 2007-05-15. Retrieved 2012-11-12. "excelvbaunit

xUnit type test harness for Excel VBA code"; Google Project - This is a list of notable test automation frameworks commonly used for unit testing. Such frameworks are not limited to unit-level testing; can be used for integration and system level testing.

Frameworks are grouped below. For unit testing, a framework must be the same language as the source code under test, and therefore, grouping frameworks by language is valuable. But some groupings transcend language. For example, .NET groups frameworks that work for any language supported for .NET, and HTTP groups frameworks

that test an HTTP server regardless of the implementation language on the server.
