Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

Virtually from the moment of its launch in April, 1964, the Ford Mustang has been a favorite among road racers. From the Tour de France, to production sports car racing, the SCCA Trans-Am series, regional and national A/Sedan competitions, and international and domestic sedan championships in Great Britain, Europe, Australia, and New Zealand, the

Mustang has enjoyed a following like few other models. This book is a photographic celebration of road racing Mustangs throughout the world. It focuses on production-based cars, rather than the heavily modified tube-frame silhouette machines that began appearing in the late 1970s. Included are images of big-budget factory-supported cars competing in the Trans-Am series, right through to low-buck independents, and cars competing throughout the world. Using only period images, including countless photos that have never before been published, this is a true photographic history, depicting the global popularity of the Ford Mustang as a road racing car.

The Financial Crisis Inquiry Report, published by the U.S. Government and the Financial Crisis Inquiry Commission in early 2011, is the official government report on the United States financial collapse and the review of major financial institutions that bankrupted and failed, or would have without help from the government. The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the financial situation in the U.S. and around the world.

THE FINANCIAL CRISIS INQUIRY COMMISSION is an independent, bi-partisan, government-appointed panel of 10 people that was created to "examine the causes, domestic and global, of the current financial and economic crisis in the United States." It was established as part of the Fraud Enforcement and Recovery Act of 2009. The commission consisted of private citizens with expertise in economics and finance, banking, housing, market regulation, and consumer protection. They examined and reported on "the collapse of major financial institutions that failed or would have failed if not for exceptional assistance from the government."

In 1988, the Chicago public school system decentralized, granting parents and communities significant resources and authority to reform their schools in dramatic ways. To track the effects of this bold experiment, the authors of *Organizing Schools for Improvement* collected a wealth of data on elementary schools in Chicago. Over a seven-year period they identified one hundred elementary schools that had substantially improved—and one

hundred that had not. What did the successful schools do to accelerate student learning? The authors of this illuminating book identify a comprehensive set of practices and conditions that were key factors for improvement, including school leadership, the professional capacity of the faculty and staff, and a student-centered learning climate. In addition, they analyze the impact of social dynamics, including crime, critically examining the inextricable link between schools and their communities. Putting their data onto a more human scale, they also chronicle the stories of two neighboring schools with very different trajectories. The lessons gleaned from this groundbreaking study will be invaluable for anyone involved with urban education.

Dietary reference values (DRVs) for energy are based on estimating the total energy expenditure (TEE) for groups of people. TEE provides a measure of the energy requirement at energy balance i.e. when energy intake matches energy expenditure. The methodology to measure TEE - the doubly labelled water (DLW) method - has advanced and as a result, the evidence base on TEE in a wide variety of population groups has expanded considerably. With the high levels of overweight and obesity currently seen in the UK and the wealth of new data now available, it was considered timely for the Scientific Advisory Committee on Nutrition (SACN) to review recommendations for the UK population. This report details the evidence and approaches SACN have considered in order to update the DRVs for energy. SACN chose a prescriptive approach to estimating energy reference values; suitable reference body weight ranges consistent with long-term good health were used to calculate energy reference values. Thus, basal metabolic rate (BMR) values were predicted using healthy reference body weights. Using this approach, if overweight groups consume the amount of energy recommended for healthy weight groups, they are likely to lose weight, whereas underweight sections of the population should gain weight towards the healthy body weight range. SACN has derived new energy reference values. For most population groups, except for infants and young children, the values have increased. DRVs should be used to assess the energy requirements for large groups of people and populations, but should not be applied to individuals due to the large variation in physical activity and energy expenditure observed between people.

This book is unique. It is a compendium of wonderful automotive treasure, as discovered. With the passage of time all cars became worthless and unloved, no matter how eminent. Racing cars inevitably became uncompetitive and redundant. Many vehicles passed into scrapyards, the motoring equivalent of a cemetery, or simply rotted away.

Denying Evolution aims at taking a fresh look at the evolution-creation controversy. It presents a truly "balanced" treatment, not in the sense of treating creationism as a legitimate scientific theory (it demonstrably is not), but in the sense of dividing the blame for the controversy equally between creationists and scientists-the former for subscribing to various forms of anti-intellectualism, the latter for discounting science education and presenting science as scientism to the public and the media. The central part of the book focuses on a series of creationist fallacies (aimed at showing errors of thought, not at deriding) and of mistakes by scientists and science educators. The last part of the book discusses long-term solutions to the problem, from better science teaching at all levels to the necessity of widespread understanding of how the brain works and why people have difficulties with critical thinking.

In 1911, Ohio entrepreneur George E. Sebring was drawn to the raw south-central Florida peninsular wilderness, known for bountiful fishing and game. After cofounding Sebring, Ohio, in 1898, he envisaged another eponymous town that would attract new residents to this largely unsettled area located 30 miles from the nearest railroad depot. The businessman purchased 9,000 acres on the shore of Lake Jackson, and his new town was designed and surveyed between October 1911 and April 1912. By virtue of its location along the Atlantic Coast Line Railroad, the community of Sebring emerged as a novel tourist and golfing destination and was established as the seat of newly formed Highlands County in 1921. Cultural and technological advances have transformed the once-rural community into a thriving modern city that today retains its small-town atmosphere as the City on the Circle.
