This book covers all aspects of out of operating room anesthesia and deep sedation practice. The practical aspects of anesthesia are emphasized, with particular stress on management of un-anticipated adverse events. A concise, yet comprehensive description of relevant basic sciences is also included. Although the contributors are predominantly North American, essential elements of out of OR practice in countries other than the USA are incorporated. Situations like those that contributed to the death of Joan Rivers are addressed with particular emphasis on their recognition, prevention and management. The importance of safety as the key element in providing anesthesia in remote or unfamiliar areas is highlighted and discussed. A lack of accurate documentation is a major drawback in out of OR anesthesia practice and the reader is drawn to the importance of documentation, both from a practical and medico legal standpoint. A separate chapter deals with research and future directions in out of OR anesthesia. Out of Operating Room Anesthesia: A Comprehensive Review, is primarily aimed at all anesthesia providers: anesthesiologists, nurse anesthetists and residents. Specific chapters such as dental anesthesia, anesthesia for ER procedures and sedation for cosmetic procedures will be useful as a reference guide to physicians exposed to brief training in anesthesia during their non-anesthesia residency program.

There is a large influx of trauma, general surgical, pediatric, neurosurgical and obstetric emergencies as the hospital is one of the major public hospitals located in a densely populated region sitting amidst major routes in the city. It also provides services for emergency cardiovascular, cerebrovascular interventions and cadaver transplants. Daily lessons from this tremendous emergency work inspired us to bring out this book. There is plethora of reference material available in basic sciences related to anesthesiology, namely physiology, pharmacology, physics and anatomy. Similarly, a large number of textbooks are on techniques such as general, regional, monitored anesthesia care as well as super specialties like cardiac, neurosurgical and pediatric anesthesia, etc. But there is a limited availability of books and references for emergency anesthesia. One has to scan and integrate parts from various sources. This book is an attempt to assimilate the scattered information and add clinical expertise. Contents of this book have been divided into nine sections to cover majority of the emergencies. General considerations for adults, obstetric and pediatric sections have been written separately to avoid duplication. An additional challenge is cases with various medical disorders for emergency surgeries. Efforts have been taken to accommodate them in first section and obstetric section. The contributors of this book work together at LTMMC and LTMGH and have a well-balanced team with fresh talent bringing the latest technological knowledge and tenured practitioners supplementing it with applied experience. Part of the team worked on collection of the matter from different sources for an ideal scenario, while the senior faculty members used their vast clinical experience for a more practical and realistic application. These combined efforts have been truly beneficial to achieve our goal to rationally mix latest technology with clinical experience and identify potential ways to conduct anesthesia with best results, at least costs and minimum risk.
