## FAQ

### **Q1: Are there any ethical concerns regarding the use of Java programming assignment solutions?**

**A1:** Yes, there are. The primary ethical concern is academic integrity. Submitting someone else's work as your own is plagiarism and can have serious consequences. Use solutions ethically as learning aids, not as a means to bypass the learning process. Understand the solution, learn from it, and then apply that knowledge to create your own code.

### **Q2: How can I improve the readability of my Java code to make it easier to understand (both for myself and others)?**

**A2:** Follow coding conventions (like those suggested by Google or Oracle), use meaningful variable and function names, add comments to explain complex logic, and format your code consistently (using proper indentation and spacing). Review your code regularly and refactor it to improve its readability.

### **Q3: What are some common mistakes to avoid when working on Java programming assignments?**

**A3:** Common mistakes include neglecting to handle potential exceptions (leading to crashes), inefficient algorithm choices, improper memory management (leading to memory leaks), overlooking edge cases in your input data, and insufficient testing.

```
```java
```

```
import java.util.Scanner;
```

```
public class Factorial {
```

```
    public static void main(String[] args) {
```

```
        Scanner input = new Scanner(System.in);
```

```
        System.out.print("Enter a non-negative integer: ");
```

```
        int number = input.nextInt();
```

```
        if (number < 0)
```

```
            System.out.println("Factorial is not defined for negative numbers.");
```

```
        else {
```

```
            long factorial = 1;
```

```
for (int i = 1; i <= number; i++)  
    factorial *= i;  
  
System.out.println("The factorial of " + number + " is " + factorial);  
}  
input.close();  
}  
}
