

Smart Land Use Analysis The Lucis Model Land Use Conflict Identification Strategy

Smart Land-use Analysis

"This volume gives readers everything they need to understand and apply the LUCIS model to their own regions. Background information on data formats and the ArcGIS geoprocessing environment is provided, and then the steps of LUCIS are laid out in an easy-to-follow manner. Concepts are illustrated by a real-world case study, a nine-county region of north central Florida where LUCIS has been applied with great success. ArcGIS assignments are provided at various points along the way to reinforce the concepts and provide hands-on experience with LUCIS techniques."

BOOK JACKET.

A Research Guide to Cartographic Resources

This book navigates the numerous American and Canadian cartographic resources available in print, and online, offering information on how to locate and access the large variety of resources. Cartographic materials are highlighted and summarized, along with lists of map libraries and geospatial centers, and related professional associations.

Advanced Land-use Analysis for Regional Geodesign

This book shows how geographic information systems (GIS) software and technology are used to analyze land-use suitability, stakeholder preferences, and conflicts between competing land interests.

Biofuel Crop Sustainability

Biofuel Crop Sustainability brings together the basic principles of agricultural sustainability and special stipulations for biofuels, from the economic and ecological opportunities and challenges of sustainable biofuel crop production to the unique characteristics of particular crops which make them ideal for biofuel applications. This book will be a valuable resource for researchers and professionals involved in biofuels development and production as well as agriculture industry personnel. Chapters focus the broad principles of resource management for ecological, environmental and societal welfare, the sustainability issues pertaining to several broad categories of biofuel crops , as well as the economics and profitability of biofuels on both a local and international scale. Coverage includes topics such as utilizing waste water for field crop irrigation and algae production, reliability of feedstock supply, marginal lands, and identifying crops with traits of significance for survival and growth on low fertility soils. The development of production practices with low external inputs of fertilizer, irrigation, and pesticides is also covered. Biofuel Crop Sustainability will be a valuable, up-to-date reference for all those involved in the rapidly expanding biofuels industry and sustainable agriculture research fields.

International Encyclopedia of Human Geography

International Encyclopedia of Human Geography, Second Edition, Fourteen Volume Set embraces diversity by design and captures the ways in which humans share places and view differences based on gender, race, nationality, location and other factors—in other words, the things that make people and places different. Questions of, for example, politics, economics, race relations and migration are introduced and discussed through a geographical lens. This updated edition will assist readers in their research by providing factual information, historical perspectives, theoretical approaches, reviews of literature, and provocative topical discussions that will stimulate creative thinking. Presents the most up-to-date and comprehensive coverage on the topic of human geography Contains extensive scope and depth of coverage Emphasizes how geographers interact with, understand and contribute to problem-solving in the contemporary world Places an emphasis on how geography is relevant in a social and interdisciplinary context

2009

Reviews are an important aspect of scholarly discussion because they help filter out which works are relevant in the yearly flood of publications

and are thus influential in determining how a work is received. The IBR, published again since 1971 as an interdisciplinary, international bibliography of reviews, it is a unique source of bibliographical information. The database contains entries on over 1.2 million book reviews of literature dealing primarily with the humanities and social sciences published in 6,820, mainly European scholarly journals. Reviews of more than 560,000 scholarly works are listed. The database increases every year by 60,000 entries. Every entry contains the following information: On the work reviewed: author, title On the review: reviewer, periodical (year, edition, page, ISSN), language, subject area (in German, English, Italian) Publisher, address of journal

The Christian Invention of Time

With trademark flair, Simon Goldhill shows how Christianity transformed humanity's relationship with time in ways that resonate today.

Land Use

There is no consensus in the social and cultural sciences on what theory is, and that is as it should be. A consensus would be outright dangerous for the diversity of intellectual life. The perspectives represented in this volume show that theory can be understood as plot, hope, beholding, doxa, heritage, a stalemate, disappointment, personal matter, or family concept. But, even if theory can be defined in many ways, it cannot be defined in any one way. Beyond disciplinary and epistemological differences, theory has the steadfast characteristic of being what academics work with. More than an epistemological matter, the book's title question is an entry into the dynamics of academic practice. The book consists of a multidisciplinary collection of essays that are tied together by a common effort to tell what theory is. These essays are also paired as dialogues between senior and junior researchers from the same, or allied, disciplines to add a trans-generational dimension to the book's multidisciplinary approach. What Is Theory? has been designed for upper division and graduate students in the social sciences and the humanities, but it will also be of interest to anyone who has felt that the question of what theory is can be more easily asked than answered. Contents include: Why Ask What Theory Is? * The History of the Concept of Theory * History of Ideas at the End of Western Dominance * Looking at Theory in Theory in Science * Theory Has No Big Others in Science and Technology Studies * What Social Science Theory Is and What It Is Not * Theory as Hope * Theory Crisis and the Necessity of Theory - The Dilemmas of Sociology * Theory as Disappointment * Theory - A Personal Matter * Theory - A Professional Matter * Economic Theory - A Critical Realist Perspective * For Theoretical Pluralism in Economic Theory * What Is Theory in Political Science? * For a New Vocabulary of Theory in Political Science * Theorizing the Earth * Spatial Theory as an Interdisciplinary Praxis. *** "This highly original, lively and

refreshing book is more than welcome: it is needed....the contributors' insights, passion and diversity fully restore the creative value of theorizing as a way to grasp, understand and more importantly shape the world.\" - Franck Cochoy, Professor of Sociology, U. of Toulouse

What is Theory?

Throughout the world, city planners and governments grapple with the challenges of urban planning using remarkably similar land use regimes. Yet the realisation is increasing that real urban problems – crime, decay, drug abuse, inequality, depression and alienation – are not easily solved by the classic devices of a strategic plan and a zoning map. Planning regimes are therefore in constant flux, as planners and governments adjust and experiment to address these problems, often with little awareness as to what they are trying to accomplish. In *Comparative Urban Land Use Planning: Best Practice*, Leslie A. Stein digs deeper, drawing on examples from around the world to discover the best practice responses to the critical issues of planning and urban social problems. Although every city has its own cultural and political milieu, patterns of change and levels of success can be discerned and universal lessons learned. By comparing different urban planning approaches and considering their underlying ideologies and assumptions, he proposes a more insightful approach to the role of land use planning. This book is both scholarly and emotional, expressing a great love of cities and calling for a more clear-eyed approach for their care.

American Book Publishing Record

Contributors from many disciplines and backgrounds discuss MCA as an integrated approach to land-use management. Sections cover problem structuring for land-use management; multiple perspectives, trade-offs, and the search for compromise and acceptable solutions; multiple actors and multiple perspectives in land-use decisions; spatial information and the integration of spatial analysis and multicriteria analysis; and the future of land-use management. The wide range of case studies include exotic forest plantations in South Africa, forests in the Kathmandu valley, and sustainable agriculture in Greece. No index. Annotation copyrighted by Book News, Inc., Portland, OR

Comparative Urban Land Use Planning

First Published in 2006. Routledge is an imprint of Taylor & Francis, an informa company.

Multicriteria Analysis for Land-Use Management

The U.S. Census Bureau presents, in PDF format, \"Population Change and Distribution, 1990 to 2000,\" an April 2001 \"Census 2000 Brief\" written by Marc J. Perry and Paul J. Mackun. The report explains that the population growth from 1990 to 2000 was the largest in U.S. history.

Economics and Contemporary Land Use Policy

Numerous analyses have identified local land-use controls as the source of our continuing problems with residential segregation and environmental deterioration. Although recent efforts to resolve these problems have focused on policy-making in local government, the existing literature on land-use control provides little guidance for these efforts. In this context *Situations and Strategies in American Land-use Planning* meets a need. From case studies of regulatory processes in rural, rural-urban fringe, suburban and urban communities in Connecticut it develops an empirically grounded theory of land-use planning which has clear implications for reforming the local planning process. Thomas Rudel's book will be invaluable to all those involved in planning as well as being of interest to environmental and rural sociologists, geographers and political scientists concerned with local government.

Population Change and Distribution, 1990 to 2000

Originally published in 1980, this book draws together a wide range of studies dealing with various aspects of land use in a text specifically designed to guide students through the complexities of the subject. It examines the history of the subject, its techniques, applications, the models that it applies and the frameworks within which it has been carried out. Land use remains a central political and practical issue in contemporary society.

Situations and Strategies in American Land-use Planning

Environmental issues, vast and varied in their details, unfold at the confluence of people and place. They present complexities in their biophysical details, their scope and scale, and the dynamic character of human action and natural systems. Addressing environmental issues often invokes tensions among battling interests and competing priorities. Air and water pollution, the effects of climate change, ecosystem transformations—these and other environmental issues involve scientific, social, economic, and institutional challenges. This book analyzes why tackling many of these problems is so difficult and why sustainability involves more than adoption of greener, cleaner technologies. Sustainability, as discussed in this book, involves knowledge flows and collaborative decision processes that integrate scientific and technological methods and tools, political and governance structures and regimes, and social and community values. The authors synthesize a holistic and adaptive approach to rethinking the framework for restoring healthy ecosystems that are the foundation for thriving communities and dynamic economies. This approach is that of collective action. Through their research and practical experiences, the authors have learned that much wisdom resides among diverse people in diverse communities. New collaborative decision-making institutions must reflect that diversity and tap into its wisdom while also strengthening linkages among scientists and decision makers. From the pre-publication reviews: “Finally, we have a book that explains how science is irrelevant without people. It’s people who decide when and how to use science, not scientists. This book gives us a roadmap for how to really solve complex problems. It involves hard work, and creating new relationships between scientists and the public that don’t typically exist in our society.” -John M. Hagan, Ph.D. President, Manomet Center for Conservation Sciences

Land Use

The synthesis and analysis featured in the first part of the book is based in large part on a series of papers that are included in their entirety in the second part of the book.

Restoring Lands - Coordinating Science, Politics and Action

The journey of which an account is given in the following pages was not undertaken in the special interests of geographical or other science nor in the service of any Government. My chief object was to gratify a long-felt desire to visit those portions of the Chinese Empire which are least known to Europeans, and to acquire some knowledge of the various tribes subject to China that inhabit the wild regions of Chinese Tibet and north-

western Yunnan. Though nearly every part of the Eighteen Provinces has in recent years been visited and described by European travellers, my route between Tachienlu and Li-chiang was one which—so far as I am aware—no British subject had ever traversed before me, and of which no description in book-form has hitherto appeared in any European language. From the ethnological point of view the Chinese Far West—to which the greater part of this book is devoted—is one of the most interesting regions in the world, and presents problems the solution of which would settle many of the vexed questions relating to the origin and inter-relations of the Asiatic peoples. As for its geographical interest, it may be sufficient to say here that the principalities of Chala and Muli contain what are probably the highest spots inhabited by man on the face of the globe, and that several of the passes crossed by my little caravan are loftier than the highest of the passes existing along the route traversed by the British expedition to Lhasa. My own contributions to geographical and ethnological lore are of the slenderest; but if I can persuade some of my readers that Tibetan Ssuch'uan and western Yunnan are worth visiting, be it only for the glory of their mountain scenery, I shall consider that my book has fulfilled the most useful purpose to which it aspires. For those who are seized by a craving to revert for a time to something like the nomadic life of our remote forefathers, or to pass like the old Hindu ascetics into "the homeless state," there can be no country in the world more full of charm than some of the wilder and less-peopled regions of the Chinese Empire. There are enormous areas in that country covered with primeval forests in which man's foot has never trod, lofty mountains whose peaks are crowned with sparkling diadems of eternal snow, grand and savage gorges in which Nature has carved for herself in indelible letters the story of the world's youth, and gloomy chasms through which rush the mighty rivers that carry to the Indian Ocean and the Pacific snows that melted on the white roof of the world. And amid all this magnificence and desolation there are lovely valleys and stretches of garden-land that might have been chosen as the Edens of a hundred mythologies, and which in historic times have been the homes of religious recluses and poets, who, like others of their kind in Western lands, found in silence and solitude a refuge from the bitterness and pain of the world, or a hermitage in which, amid scenes of perennial beauty, they could weave their flowers of thought into immortal garlands of human words.

Land Use in America

A unique and compelling exploration of interactions among law, geography, history, and culture and their joint influence on the evolution of land use and urban form in the United States.

From Peking to Mandalay: A Journey from North China to Burma through Tibetan Ssuch'uan and Yunnan

Wildlife and Recreationists defines and clarifies the issues surrounding the conflict between outdoor recreation and the health and well-being of wildlife and ecosystems. Contributors to the volume consider both direct and indirect effects of wildlife-recreationist interactions, including: wildlife responses to disturbance, and the origins of these responses how specific recreational activities affect diverse types of wildlife the human dimensions of managing recreationists the economic importance of outdoor recreation how wildlife and recreationists might be able to coexist The book is a useful synthesis of what is known concerning wildlife and recreation. More important, it addresses both research needs and management options to minimize conflicts.

Land Use and Society

The result of extensive scholarship and consultation with leading scholars, this text introduces students to twenty-four theorists and compares and contrasts their theories on how we develop as individuals. Emphasizing the theories that build upon the developmental tradition established by Rousseau, this text also covers theories in the environmental/learning tradition.

Sharia and National Law

A stimulating, eclectic account of new media that finds its origins in old media, particularly the cinema. In this book Lev Manovich offers the first systematic and rigorous theory of new media. He places new media within the histories of visual and media cultures of the last few centuries. He discusses new media's reliance on conventions of old media, such as the rectangular frame and mobile camera, and shows how new media works create the illusion of reality, address the viewer, and represent space. He also analyzes categories and forms unique to new media, such as interface and database. Manovich uses concepts from film theory, art history, literary theory, and computer science and also develops new theoretical constructs, such as cultural interface, spatial montage, and cinegratography. The theory and history of cinema play a particularly important role in the book. Among other topics, Manovich discusses parallels between the histories of cinema and of new media, digital cinema, screen and montage in cinema and in new media, and historical ties between avant-garde film and new media.

Wildlife and Recreationists

"Who Watches the Watchmen?" could hardly be more timely as we debate the recent leaking of the largest trove of documents in American history. The "WikiLeaks" case drives home the need for what this book lays out: an approach to protecting classified information that goes beyond law enforcement. Gary Ross' application of Rational Choice Theory codifies, organizes, and extends what many of us have been trying to do instinctively when dealing with unauthorized disclosures. "Watchmen" attempts to answer two significant, timely questions: What is the extent of the threat to national security posed by the media's disclosure of classified information? What are a journalist's motivations and justifications for publishing this information? The author concludes that the dilemma between withholding information in the interest of national security and the constitutional guarantee of a free press cannot be "solved"

Theories of Development: Concepts and Applications

This is the first comprehensive commentary on Aeneid 11. The commentary treats fully matters of linguistic and textual interpretation, metre and prosody, grammar, lexicon and idiom, of Roman behaviour, social and ritual, as well as Virgil's sources and the literary tradition. New critical approaches and developments in Virgilian studies have been taken into account with economy and fairness. The Latin text is presented with a facing English translation. The commentary is followed by an appendix on Penthesilea and the Epic Cycle and a second appendix which discusses the weaknesses of Aeneid 11. The book concludes with English and Latin indices. In approach and learning, this commentary continues Nicholas Horsfall's impressive work as a commentator and will advance our understanding of the Aeneid and the poet Virgil.

The Language of New Media

This book provides an overview of recent developments and applications of the Land Use Scanner model, which has been used in spatial planning for well over a decade. Internationally recognized as among the best of its kind, this versatile model can be applied at a national level for trend extrapolation, scenario studies and optimization, yet can also be employed in a smaller-scale regional context, as demonstrated by the assortment of regional case studies included in the book. Alongside these practical examples from the Netherlands, readers will find discussion of more theoretical aspects of land-use models as well as an assessment of various studies that aim to develop the Land-Use Scanner model further. Spanning the divide between the abstractions of land-use modelling and the imperatives of policy making, this is a cutting-edge account of the

way in which the Land-Use Scanner approach is able to interrogate a spectrum of issues that range from climate change to transportation efficiency. Aimed at planners, researchers and policy makers who need to stay abreast of the latest advances in land-use modelling techniques in the context of planning practice, the book guides the reader through the applications supported by current instrumentation. It affords the opportunity for a wide readership to benefit from the extensive and acknowledged expertise of Dutch planners, who have originated a host of much-used models.

Who Watches the Watchmen?

El libro incluye 23 autores de diversos países iberoamericanos, además de una introducción y la reflexión final. Se divide en tres grandes apartados: el primero: El radar geográfico: aproximaciones de amplio espectro examina la Geografía Social, Económica y Ambiental; el segundo: Temas transversales estudia los ejes que cruzan las ciencias sociales especialmente integradas: terminología, análisis espacial, tecnologías vinculadas a la información geográfica y el tercero de ellos: Investigación aplicada, donde se presentan ejemplos de investigación de punta en la región iberoamericana. Los autores destacan que desde algunos años, los trabajos en ciencias sociales que le otorgan un papel estratégico a la dimensión espacial están registrando un enorme interés en el mundo y que Iberoamérica no escapa a esta tendencia. Esto se puede observar en la abundante producción científica de la región, derivada de este enfoque, en sus contribuciones claves al diseño de políticas públicas y privadas o en la consolidación de numerosas revistas especializadas (como EURE: Chile Economía, Sociedad y Territorio: México).

Virgil, Aeneid 11

A Framework for Geodesign: Changing Geography by Design, published by Esri Press, details the procedures that pioneer landscape architect and planner Carl Steinitz developed for the implementation of geodesign in the planning process. Geodesign is a methodology that provides a design framework and supporting technology to leverage geographic information, resulting in designs that more closely follow natural systems. Describing A Framework for Geodesign, author Steinitz says, \"This book should be seen as a discussion with examples, intended to illustrate the issues and choices involved in the organization and management of large and complex geodesign studies and projects.\" Steinitz' framework is shaped by a set of six key questions he developed while analyzing and refining the geodesign process: How should the study area be described?; How does the study area function?; Is the current study area working well?; How might the study area be altered?; What difference might the changes cause?; How should the study area be changed?

Land-Use Modelling in Planning Practice

This book contains selected papers presented during the bi-annual World Renewable Energy Network's Med Green Forum aimed at the international community as well as Mediterranean countries. This forum highlights the importance of growing renewable energy applications in two main sectors: Electricity Generation and the Sustainable Building Sector. In-depth chapters highlight the most current research and technological breakthroughs, covering a broad range of renewable energy technologies and applications in all sectors – for electricity production, heating and cooling, agricultural applications, water desalination, industrial applications and for the transport sectors.

Geografía aplicada en Iberoamérica

The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline. The number of peer-reviewed papers published in geomorphic journals has grown steadily for more than two decades and, more importantly, the diversity of authors with respect to geographic location and disciplinary background (geography, geology, ecology, civil engineering, computer science, geographic information science, and others) has expanded dramatically. As more good minds are drawn to geomorphology, and the breadth of the peer-reviewed literature grows, an effective summary of contemporary geomorphic knowledge becomes increasingly difficult. The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics, to graduate students starting a literature review for their thesis work, and professionals seeking a concise summary of a particular topic. Information on the historical development of diverse topics within geomorphology provides context for ongoing research; discussion of research strategies, equipment, and field methods, laboratory experiments, and numerical simulations reflect the multiple approaches to understanding Earth's surfaces; and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research. Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces. This Treatise on Geomorphology provides a useful synthesis of the state of the discipline, as well as highlighting productive research directions, that Educators and students/researchers will find useful. Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field. Undergraduate students looking for term paper topics, to graduate students starting a literature review for their thesis work, and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor-in-Chief, Prof. J. F. Shroder of the University of Nebraska at Omaha, is past president of the QG&G section of the Geological Society of America and present Trustee of the GSA Foundation, while being well respected in the geomorphology research community and having won numerous awards in the field. A host of noted international geomorphologists have contributed state-of-the-art chapters to the work. Readers can be guaranteed that every

chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor-in-Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14-volume masterpiece. From the foundations and history of geomorphology through to geomorphological innovations and computer modelling, and the past and future states of landform science, no \"stone\" has been left unturned!

The Organisational Analysis

This ground-breaking book brings theoretical perspectives from twenty-first century media, film, and cultural studies to medieval hagiography. *Medieval Saints and Modern Screens* stakes the claim for a provocative new methodological intervention: consideration of hagiography as media. More precisely, hagiography is most productively understood as cinematic media. Medieval mystical episodes are made intelligible to modern audiences through reference to the filmic - the language, form, and lived experience of cinema. Similarly, reference to the realm of the mystical affords a means to express the disconcerting physical and emotional effects of watching cinema. Moreover, cinematic spectatorship affords, at times, a (more or less) secular experience of visionary transcendence: an 'agape-ic encounter'. The medieval saint's visions of God are but one pole of a spectrum of visual experience which extends into our present multi-media moment. We too conjure godly visions: on our smartphones, on the silver screen, and on our TVs and laptops. This book places contemporary pop-culture media - such as blockbuster movie *The Dark Knight*, Kim Kardashian West's social media feeds, and the outputs of online role-players in *Second Life* - in dialogue with a corpus of thirteenth-century Latin biographies, *'Holy Women of Liège'*. In these texts, holy women see God, and see God often. Their experiences fundamentally orient their life, and offer the women new routes to knowledge, agency, and belonging. For the holy visionaries of Liège, as with us modern 'seers', visions are physically intimate, ideologically overloaded spaces. Through theoretically informed close readings, *Medieval Saints and Modern Screens* reveals the interconnection of decidedly 'old' media - medieval textualities - and artefacts of our 'new media' ecology, which all serve as spaces in which altogether human concerns are brought before the contemporary culture's eyes.

A Framework for Geodesign

Much of the preparation of this book has been generously supported by the Lincoln Institute of Land Policy, Cambridge, Massachusetts. It evolved from a colloquium held in October 1977, under the sponsorship of the Lincoln Institute. The three-day symposium entitled \"Land Policy: Making the Value Choices\" involved the preparation of major papers and formal discussions, most of which appear here in considerably revised form,

along with additional pieces commissioned later. The colloquium was an idea jointly conceived by myself and Edward Wood, a colleague at the time in the Tufts University Program in Urban Social and Environmental Policy. We were concerned about two major limitations in the literature and debates over land use. On the one hand, there was little explicit recognition of the latent values that motivated land use policy. On the other, there was no common forum where people from the different land use fields could discuss the issues and learn from one another. A small group of about two dozen people was invited to the colloquium. Each member was a leading spokesman for a different perspective and area of expertise. All participated formally in some fashion. All the papers were written expressly for the colloquium, with the exception of Ann Strong's, which was a keynote address to the American Society of Planning Officials earlier in the year. None of the papers has been published elsewhere.

Sustainable Building for a Cleaner Environment

This book is about the power of education: the kind of education that simultaneously improves the quality of life both of individuals and the wider society. It explains why education must be viewed as a basic human right, as a value in and of itself, and reviews the evidence on how education builds the human resources that individuals and nations need to be productive, to continue to learn, to solve problems, to be creative, and to live together and with nature in peace and harmony. When nations ensure that such an education is accessible to all throughout their lives, education becomes the engine of sustainable development – economic, social, moral and cultural. The book is unique in that it covers the development of education at all levels in all countries of the Asia-Pacific region and beyond, using the latest international data bases, while blending in analyses of both quantitative and qualitative research.

Treatise on Geomorphology

An overview of the art historical antecedents to virtual reality and the impact of virtual reality on contemporary conceptions of art. Although many people view virtual reality as a totally new phenomenon, it has its foundations in an unrecognized history of immersive images. Indeed, the search for illusionary visual space can be traced back to antiquity. In this book, Oliver Grau shows how virtual art fits into the art history of illusion and immersion. He describes the metamorphosis of the concepts of art and the image and relates those concepts to interactive art, interface design, agents, telepresence, and image evolution. Grau retells art history as media history, helping us to understand the phenomenon of virtual reality beyond the hype. Grau shows how each epoch used the technical means available to produce maximum illusion. He discusses frescoes such as those in the Villa dei Misteri in Pompeii and the gardens of the Villa Livia near Prima Porta, Renaissance and Baroque illusion spaces, and

panoramas, which were the most developed form of illusion achieved through traditional methods of painting and the mass image medium before film. Through a detailed analysis of perhaps the most important German panorama, Anton von Werner's 1883 The Battle of Sedan, Grau shows how immersion produced emotional responses. He traces immersive cinema through Cinerama, Sensorama, Expanded Cinema, 3-D, Omnimax and IMAX, and the head mounted display with its military origins. He also examines those characteristics of virtual reality that distinguish it from earlier forms of illusionary art. His analysis draws on the work of contemporary artists and groups ART+COM, Maurice Benayoun, Charlotte Davies, Monika Fleischmann, Ken Goldberg, Agnes Hegedues, Eduardo Kac, Knowbotic Research, Laurent Mignonneau, Michael Naimark, Simon Penny, Daniela Plewe, Paul Sermon, Jeffrey Shaw, Karl Sims, Christa Sommerer, and Wolfgang Strauss. Grau offers not just a history of illusionary space but also a theoretical framework for analyzing its phenomenologies, functions, and strategies throughout history and into the future.

Medieval Saints and Modern Screens

This book contributes to broadening the interdisciplinary knowledge basis for the description, analysis and assessment of land use practices. It presents conceptual advances grounded in empirical case studies on four main themes: distal drivers, competing demands on different scales, changing food regimes and land-water competition. Competition over land ownership and use is one of the key contexts in which the effects of global change on social-ecological systems unfold. As such, understanding these rapidly changing dynamics is one of the most pressing challenges of global change research in the 21st century. This book contributes to a deeper understanding of the manifold interactions between land systems, the economics of resource production, distribution and use, as well as the logics of local livelihoods and cultural contexts. It addresses a broad readership in the geosciences, land and environmental sciences, offering them an essential reference guide to land use competition.

The Land Use Policy Debate in the United States

This work argues for the existence of a committee of 300, an elite body which controls every aspect of politics, religion, commerce and industry, answerable to no one except itself. It maintains that the confusion of social and moral values in the free world has been deliberately created.

Evaluating Land Use Tradeoffs

This collection presents research-based interventions using existing knowledge to produce new pedagogies to teach evolution to learners more successfully, whether in schools or elsewhere. 'Success' here is measured as cognitive gains, as acceptance of evolution or an increased desire to continue to learn about it. Aside from introductory and concluding chapters by the editors, each chapter consists of a research-based intervention intended to enable evolution to be taught successfully; all these interventions have been researched and evaluated by the chapters' authors and the findings are presented along with discussions of the implications. The result is an important compendium of studies from around the world conducted both inside and outside of school. The volume is unique and provides an essential reference point and platform for future work for the foreseeable future.
